DETAILED ACTION

Claim Rejections - 35 USC § 102

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-34 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent number 6,085,172 to Junger (hereinafter Junger).

Junger teaches a method and apparatus for product return transactions that includes a return approval computer system utilizes product identifying information to determine whether a returned product satisfies applicable return criteria (column 2; lines 47-49). Junger further teaches a return approval location providing a list of approved returns and unapproved returns along with a return authorization or confirmation (column 2; lines 54-56). Junger teaches input devices and computing devices connected via the Internet (column 5; lines 9-12).

Junger teaches return criteria that includes temporal, usage or a dynamic rule that a business value condition must be satisfied (column 7; lines 7-14). Junger further teaches determining if one of the items needs to be physically returned and if not saving the cost of shipping by not returning the product (column 7; lines 13-17).

Junger teaches a data storage unit that stores data associated with the purchased items. In particular data is saved in regards to product identification, purchase location, date of return and quantity purchased. Junger teaches not only having this data available for mining but also mining the data in order to determine if a proper return is being made (column 6; lines 47-57).

Response to Arguments

Applicant's arguments with respect to the rejection under 35 U.S.C. 101 have been fully considered and are persuasive. In light of applicant's amendments the rejection has been withdrawn.

Applicant's arguments with respect to the rejection under 35 U.S.C. 102(e) as being anticipated by U.S. Patent number 6,085,172 to Junger (hereinafter Junger) have been fully considered but they are not persuasive.

Applicant asserts that Junger fails to teach a dynamic rule that a business value condition must be satisfied. Claim 6 further defines these conditions as one of current business conditions and markets, inventory levels, weather conditions, seasonal forecasts, an age/value curve for the product and any combination. Examiner sites column 7; lines 7-14, as examples of business rules. In addition these rules can be dynamic, for example when considering the age or warranty period.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO**

Art Unit: 3627

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
